# Software requirements Specification (SRS)
# Online Case Management System

**Name:** Mukesh Raja S
**Register Number:** 7376232IT207
**Project Title:** Online Case Management System
**Technology:** PHP, MySQL, HTML, CSS, JavaScript
**Server:** XAMPP

## 1. Introduction

### 1.1 Purpose

The purpose of this Software Requirements Specification (SRS) document is to describe the functional and non-functional requirements of the **Online Case Management System (OCMS)**. This document serves as a reference for developers, testers, project guides, and evaluators to understand the system's scope, design, and functionality.

### 1.2 Scope

The Online Case Management System is a web-based application designed to manage student case submissions and staff approvals digitally. It replaces the manual case handling process with an automated system, ensuring transparency, efficiency, and secure data management.

### 1.3 Definitions and Abbreviations

- **OCMS** – Online Case Management System
- **UI** – User Interface
- **DB** – Database
- **CRUD** – Create, Read, Update, Delete

### 1.4 References

- PHP Documentation
- MySQL Documentation
- HTML, CSS, JavaScript Standards

## 2. Overall Description

### 2.1 Product Perspective

OCMS is a standalone web application accessed through a browser. It uses a centralized MySQL database and role-based access control for students and staff.

## 2.2 Product Functions

- User authentication
- Case submission and management
- Case approval and rejection
- Status tracking and history
- Secure session handling

## 2.3 User Classes

| User | Description |
|---|---|
| Student | Can submit cases, edit/delete pending cases, and view case history |
| Staff | Can review cases, approve or reject them, and view history |

## 2.4 Operating Environment

- Client: Web browser
- Server: Apache (XAMPP / WAMP)
- Backend: PHP
- Database: MySQL
- OS: Windows / Linux

# 3. System Architecture

## 3.1 Architecture Overview

The system follows a **client–server architecture**:

- Frontend handles UI and user interaction
- Backend processes business logic
- Database stores application data

## 3.2 Folder Structure Overview

- auth/ – Login, register, logout
- student/ – Student dashboard and case operations
- staff/ – Staff dashboard and case review

- config/ – Database configuration
- assets/css/ – Stylesheets
- assets/js/ – JavaScript files

## 4. Frontend Specification

### 4.1 Frontend Technologies

- HTML5
- CSS3
- JavaScript
- PHP (suggests dynamic UI rendering)

### 4.2 User Interface Design

### Login Interface

- Username and password fields
- Login button
- Error messages for invalid credentials

### Student Dashboard UI

- Navigation menu
- Add Case form
- My Cases list
- Case History section
- Edit and Delete options for pending cases
- Logout button

### Add Case Fields:

- Student Name
- Roll Number
- Case Type
- Case Description

- **Staff Dashboard UI**
- Received Cases list
- Case description view
- Approve and Reject buttons
- Approved and Rejected cases pages
- Case history view
- Logout option

### 4.3 Frontend Validation

- Mandatory field validation
- Prevent empty form submission
- User-friendly alert messages

### 4.4 Usability and Responsiveness

- Simple and clean UI
- Easy navigation
- Responsive design for desktops and laptops

## 5. Functional Requirements

### 5.1 Authentication Module

- User login with credentials
- Role-based redirection
- Secure logout

### 5.2 Student Module

- Add new case
- View submitted cases
- Edit or delete pending cases
- View approved and rejected case history

### 5.3 Staff Module

- View received cases
- Approve cases
- Reject cases
- View approved and rejected cases

### 5.4 Case Management

- Status: Pending, Approved, Rejected
- Real-time status updates
- Case history maintenance

## 6. Non-Functional Requirements

### 6.1 Performance

- Page load time under 3 seconds
- Supports multiple users

### 6.2 Security

- Session-based authentication
- Restricted access to pages
- Database connection security

### 6.3 Reliability

- Data consistency
- Minimal system downtime

### 6.4 Maintainability

- Modular code structure
- Easy to update and debug

### 6.5 Usability

- Minimal training required
- Clear UI messages

## 7. Database Design

### 7.1 Database Overview

The system uses a MySQL database to store:

- User credentials
- Case details
- Case status history

### 7.2 Sample Tables

- users
- students
- staff
- cases

### 7.3 Data Integrity

- Primary keys for unique identification
- Status field for case tracking

## 8. Assumptions and Dependencies

- Users have basic computer knowledge
- Server is properly configured
- Internet or local server access available

## 9. Future Enhancements

- Email notifications
- Admin module
- File upload support
- Advanced search and filters
- Mobile-friendly version

## 10. Conclusion

The Online Case Management System provides a reliable and efficient platform for managing student cases digitally. It improves transparency, reduces paperwork, and enhances communication between students and staff through a secure and user-friendly interface.
